PROFESSIONAL SUMMARY

Full-stack developer specializing in **TypeScript** and **Node.js**, with experience building scalable backends, real-time web apps, and **Generative AI** systems using **LLMs** and **LangChain**. **600+** DSA problems solved (LeetCode rating **1800+**). Strong in **System Design**, **REST APIs**, authentication, database design, and scalable architecture.

EDUCATION

Indian Institute of Information Technology, Sonapat

Sonapat, India

B.Tech Information Technology (GPA: 8.0/10)

Expected June 2027

Relevant Coursework: Data Structures & Algorithms, DBMS, Operating Systems, Computer Networks

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, C++, SQL

Frontend: React.js, Next.js, HTML5, CSS3, Tailwind CSS

Backend: Node.js, Express.js, REST APIs, Authentication, API Design, WebSockets, Socket.io, WebRTC

Databases: PostgreSQL, MongoDB, MySQL, Redis, Pinecone

AI/GenAI: LLMs, LangChain, Prompt Engineering, RAG, Vector Embeddings

Tools: Prisma ORM, Docker, Git, CI/CD

Concepts: System Design, LLD, Event-Driven Architecture

PROFESSIONAL EXPERIENCE

Xelron AI

Feb 2026 – Apr 2026

Software Development Engineer (Intern)

Remote / India

- Shipped **4 authentication REST endpoints** (sign-up, login, session refresh, validation) for the web app; tightened ORM queries on user/auth paths (fewer round-trips, smaller selects), cutting hot-path **response time by ~50%**; coordinated with frontend when request shapes changed.
- Debugged production auth issues (failed logins, flaky sessions), added structured logging, and landed **fixes through code review**

PROJECTS

CodePlanner | *Full-Stack Developer*

[\[GitHub\]](#) | [\[App\]](#)

- Built a GitHub analysis engine with **no-clone REST ingestion** (lower latency/storage); Gemini pipelines for stack, architecture maps, request flow, and traffic capacity over a **~180K-token** context window, plus a greenfield planner from a product + load spec.
- Added source-based security scoring and **2x/4x/8x** scale-up paths from the same capacity model; Redis analysis cache and GitHub OAuth for private repos and higher rate limits.

Tech: TypeScript, Next.js, GitHub REST, Gemini, Redis, SQLite, OAuth.

HealthCura | *Full-Stack (Self-Project)*

[\[GitHub\]](#) | [\[Demo\]](#)

- Built a doctor-appointment platform: map-based provider discovery, slot booking, **Razorpay** checkout, and **2-role** access (patient vs doctor) with JWT + RBAC.
- Added an **AI report assistant** that answers patient questions from uploaded medical reports; Express/Mongoose REST with MongoDB **2dsphere** proximity search, overlap-checked booking, and idempotent writes.

Tech: React, Express, Mongoose, MongoDB (geospatial), JWT, Razorpay, LLM, Maps JavaScript API.

Blah Blah | *Full-Stack (Self-Project)*

[\[GitHub\]](#) | [\[Demo\]](#)

- Built a real-time platform for chat, video calls, watch parties, and collaborative tools over Socket.IO + WebRTC.
- Implemented synchronized multimedia playback with **±30 ms** drift for shared watch sessions.
- Designed JWT auth and WebRTC signaling with STUN/TURN fallback for reliable P2P connections.

Tech: React, Socket.IO, WebRTC, STUN/TURN, MongoDB, JWT.

COMPETITIVE PROGRAMMING

- Solved **600+** problems on LeetCode; contest rating **1800+**.
