PROFESSIONAL SUMMARY

Full-stack developer specializing in **TypeScript** and **Node.js**, with experience building scalable backend systems, real-time web applications, and **Generative AI** solutions using **LLMs** and **LangChain**. Strong understanding of **System Design**, **REST APIs**, authentication, database design, and scalable software architecture.

EDUCATION

Indian Institute of Information Technology, Sonapat

Sonapat, India

B.Tech Information Technology (GPA: 8.0/10)

Expected June 2027

Relevant Coursework: Data Structures & Algorithms, DBMS, Operating Systems, Computer Networks

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, C++, SQL, NextJS

Frontend: React.js, Next.js, HTML5, CSS3, Tailwind CSS

Backend: Node.js, Express.js, REST APIs, Authentication, API Design, WebSockets, Socket.io, WebRTC

Databases: PostgreSQL, MongoDB, MySQL, Redis, Pinecone

AI/GenAI: LLMs, LangChain, Prompt Engineering, RAG, Vector Embeddings

Tools: Prisma ORM, Docker, Git, CI/CD

Concepts: System Design, LLD, Event-Driven Architecture

PROFESSIONAL EXPERIENCE

Xelron AI

Feb 2026 – Mar 2026

Software Development Engineer (Intern)

Remote / India

- Contributed to **authentication REST endpoints** (sign-up, login, session refresh, validation) for the web app, following team patterns for handlers and errors; helped **tighten ORM queries** on user/auth paths (fewer redundant calls, smaller selects), **reducing response time by approximately 50%** on the hot paths we touched; coordinated with frontend when request shapes changed.
- Assisted with **production debugging**: reproduced user issues (e.g. failed logins, flaky sessions), **added logging**, and shipped **small fixes** through code review.

PROJECTS

Git-Pulse | *Full-Stack Developer*

[\[GitHub\]](#)

- Built a **GitHub repository analysis engine**: **REST**-based full-file ingestion (no clone—lower latency/storage); pipeline for **dependency graphs**, **module architecture**, and **cross-file** structure via **static analysis** + **LLM**; **repo chat** with **RAG** over embeddings; **security scanning** for vulnerable deps and risky patterns (**rules** + **LLM-assisted**).
- Core: TypeScript/Node.js**—GitHub REST ingestion, chunk/embed pipeline, vector RAG, rule packs + LLM prompts.

Tech: TypeScript, Node.js, GitHub REST, embeddings/RAG, LLM.

HealthCura | *Full-Stack (Self-Project)*

[\[GitHub\]](#) | [\[Demo\]](#)

- Built a **doctor appointment** platform: patients discover providers on a **map**, book time slots, and use **role-based** flows (patient vs doctor) with profiles and secure access to scheduling data.
- Core: Express/Mongoose REST** with **JWT** and **RBAC**; **2dsphere GeoJSON** for proximity search; booking with **overlap** checks and **idempotent** writes; **React** with protected routes.

Tech: React, Express, Mongoose, MongoDB (geospatial), JWT, Maps JavaScript API.

Blah Blah | *Full-Stack (Self-Project)*

[\[GitHub\]](#) | [\[Demo\]](#)

- Built a real-time communication platform supporting chat, video calls, watch parties, and collaborative tools.
- Implemented synchronized multimedia playback with ± 30 ms drift accuracy for shared experiences.
- Designed authentication and WebRTC signaling with STUN/TURN fallback for reliable peer-to-peer connections.

Tech: React, Socket.IO, WebRTC, STUN/TURN, MongoDB, JWT.

COMPETITIVE PROGRAMMING

- Solved **500+** problems on LeetCode; contest rating **1730+**.
